A core text in the Fundamentals of Biomedical Science series, Biomedical Science Practice gives a comprehensive overview of the key laboratory techniques and professional skills that students need to master. The text is supported throughout with engaging clinical case studies, written to emphasize the link between theory and practice, providing a strong foundation for beginning biomedical science students.

The science of transfusion and transplantation demands a multifaceted understanding of immunology, haematology, and genetics from the biomedical scientist. Transfusion and Transplantation Science coherently synthesises the essential concepts of these subjects and presents them within the practical framework of the hospital banking and transplantation centre, thereby furnishing the reader with the knowledge and skills required to specialize in this discipline. Beginning with an overview of potential immune responses to transfusion and transplantation, the text goes on to explain the aetiology behind these responses with a view to the prediction, diagnosis, and mitigation of adverse effects on the patient. It then outlines issues of quality, but also regulatory and legal concerns, that need to be considered when collecting, preparing, and storing products for transfusion or transplantation.

Cytopathology provides a wide-ranging overview of the microscopic study of normal and abnormal cells, showing how current visualization methods are used to study cell structure, and how early detection of abnormal cell pathology can lead to timely clinical interventions.

Biomedical Sciences is an indispensable, all encompassing core textbook for first/ second year biomedical science students that will support them throughout their undergraduate career. The book includes the key components of the IBMS accredited degree programmes, plus sections on actual practice in UK hospital laboratories (including the compilation of a reflective portfolio). The book is visually exciting, and written in an interesting and accessible manner while maintaining scientific rigour.
