Yet as New York Times bestselling author Steven Pinker shows in this startling and engaging new work, just the opposite is true: violence has been diminishing for millenia and we may be living in the most peaceful time in our species's existence. For most of history, war, slavery, infanticide, child abuse, assassinations, programs, gruesome punishments, deadly quarrels, and genocide were ordinary features of life. But today, Pinker shows (with the help of more than a hundred graphs and maps) all these forms of violence have dwindled and are widely condemned. How has this happened? This groundbreaking book continues Pinker's exploration of the essence of human nature, mixing

Reasoning is the critical thinking skill concerned with the production of arguments: making them coherent, consistent, and well-supported; and responding to opposing positions where necessary. The Better Angels of Our Nature offers a step-by-step class

in precisely these skills. Author Steven Pinker's central thesis is simple: mankind has become increasingly less violent over the centuries, and will continue to do so. Pinker is aware, though, that many people instinctively believe the opposite, and *Better Angels* is devoted to marshalling data to support and illustrate this central argument, as well as a series of secondary arguments about how and why humanity has become less violent. Pinker's interpretative skills – understanding the meaning of the complex evidence from history – are also on display throughout, as he tackles the ambiguities of his data, the problems it presents, and the viable inferences one can draw from it.

While science offers a wealth of rational explanations for natural phenomena, we often prefer to embrace the fantasies that reassured our distant ancestors. And we'll even go to war to protect our delusions against those who do not share them. These are examples of what evolutionary psychologist Hank Davis calls Caveman Logic. Although some examples are funny, the condition itself is no laughing matter. In this engagingly written book, Davis encourages us to transcend the mental default settings and tribal loyalties that worked well for our ancestors back in the Pleistocene age. Davis laments a modern world in

which more people believe in ESP, ghosts, and angels than in evolution. Superstition and religion get particularly critical treatment, although Davis argues that religion, itself, is not the problem but an inevitable by-product of how our minds misperform. Davis argues, It's time to move beyond the one-size-fits-all, safety and comfort-oriented settings that got our ancestors through the terrifying Pleistocene night. In contrast, Davis advocates a world in which spirituality is viewed as a dangerous rather than an admirable quality, and suggests ways in which we can overcome our innate predisposition toward irrationality. He concludes by pointing out that biology is not destiny. Just as some of us succeed in watching our diets, resisting violent impulses, and engaging in unselfish
